

# Coding Challenges

**Write a function that will return the reverse of the value of the first parameter.**

```
/**  
 * Reverses the value of the input.  
 *  
 * @param {string|number} input – The value to be reversed. Can be a string or a number.  
 * @returns {string} The reversed string representation of the input.  
 */  
function reverseValue(input) {  
    // ...  
}
```

1. **Create a function with one parameter. Have the function `console.log()` the input.**
2. **Define an empty string variable called `reverse` to store the reversed string.**
3. **Use a `for` loop to iterate through each character.**
4. **Append each character to the beginning of the `reverse` variable.**
5. **Return the contents of the `reverse` variable.**
